MEDICINE

Recap from previous webinar:

Social norms assessment

It is a process of **identifying whether a norm exists for a target population within a given reference group** as it relates to a behavioral outcome of interest

Example: Using interviews with vignettes to uncover reactions to a fictional story.

After assessing and diagnosing social norms, design **monitoring and evaluation processes**

There are multiple **methods and methodologies** to **assess norms**

Interviews & vignettes are useful to understand reference groups and how communities may react to norms being challenged.

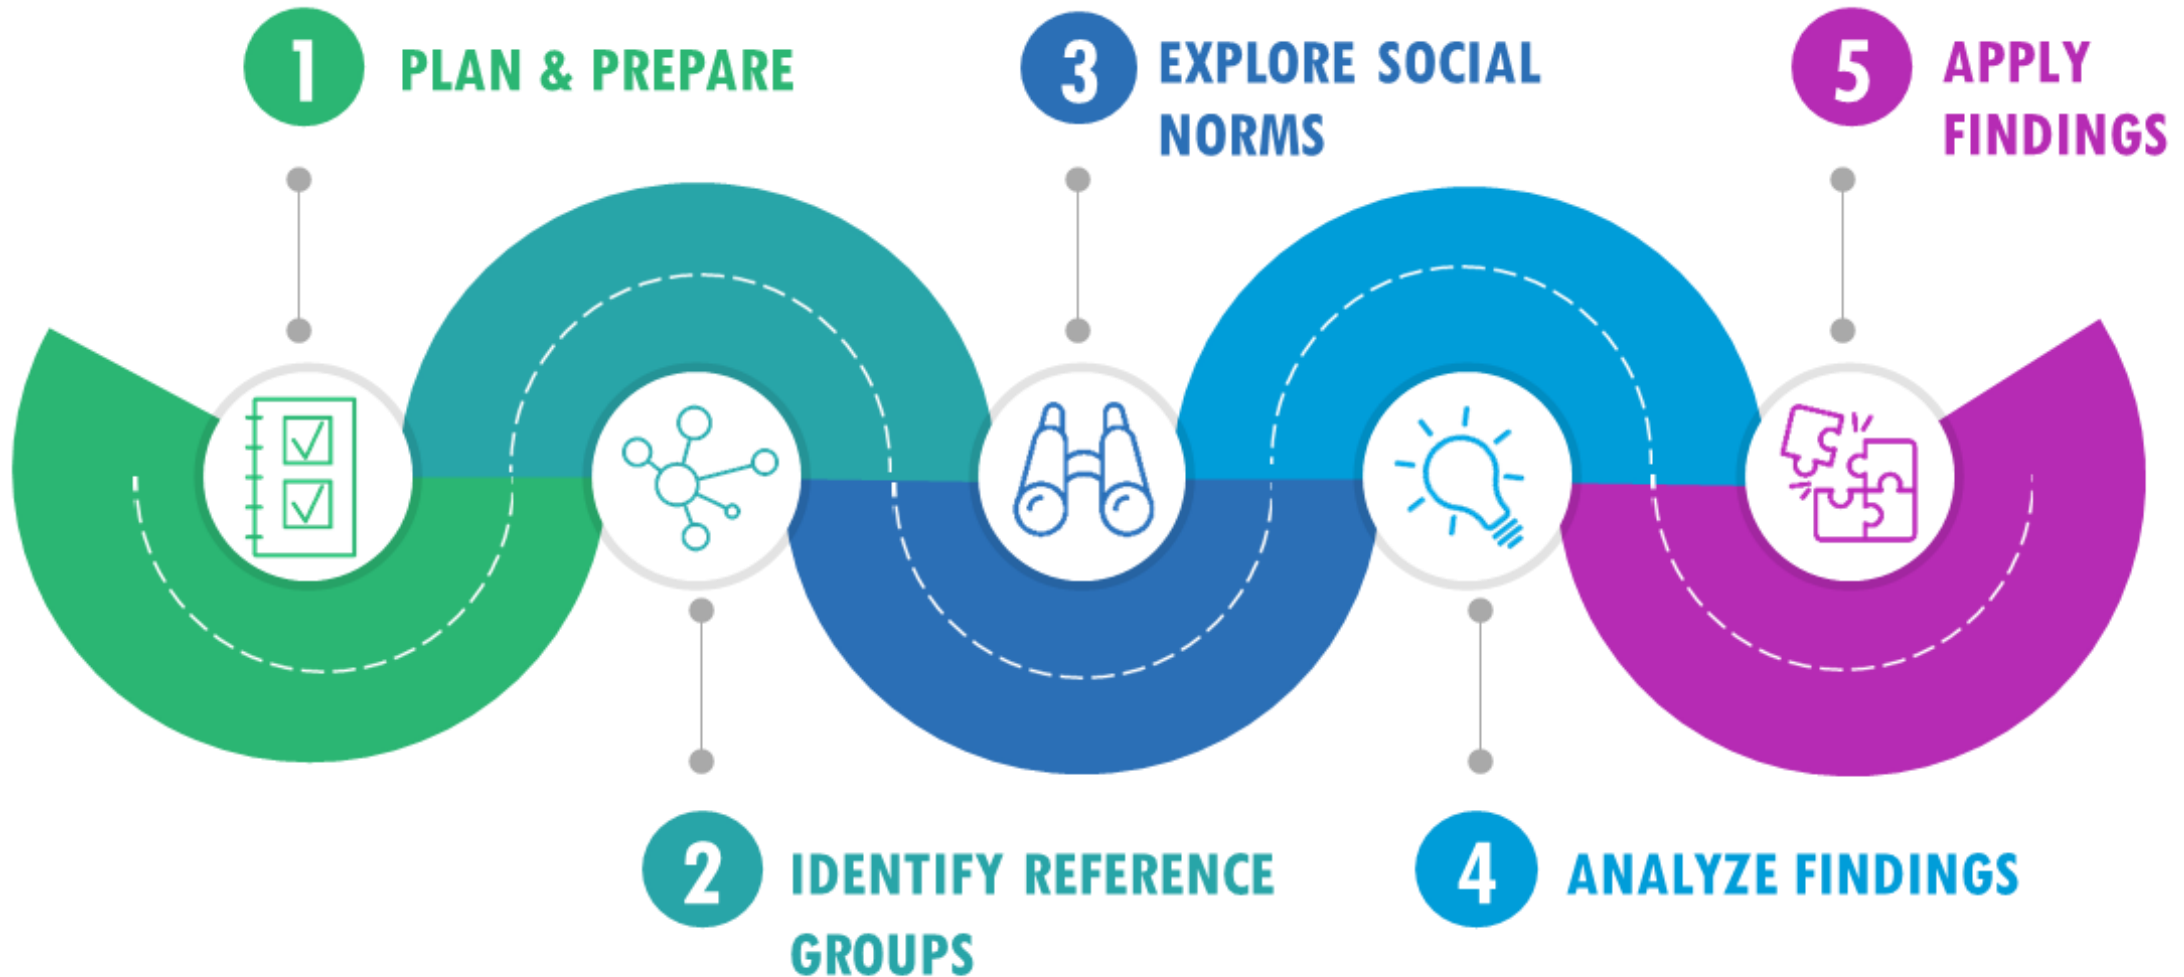

Ranking exercises allow us to learn how certain norms supersede others & **surveys** reveal how typical something is in a community.

Focus groups help understand the group's ideas about an issue.

Social Norms Exploration Process

How does change
happen?

1

Change is not just about communicating **knowledge** to people.

New knowledge

(New attitudes)

New behaviour

This is how
change actually
happens!

2

Change happens when **enough people see** that enough people are changing.

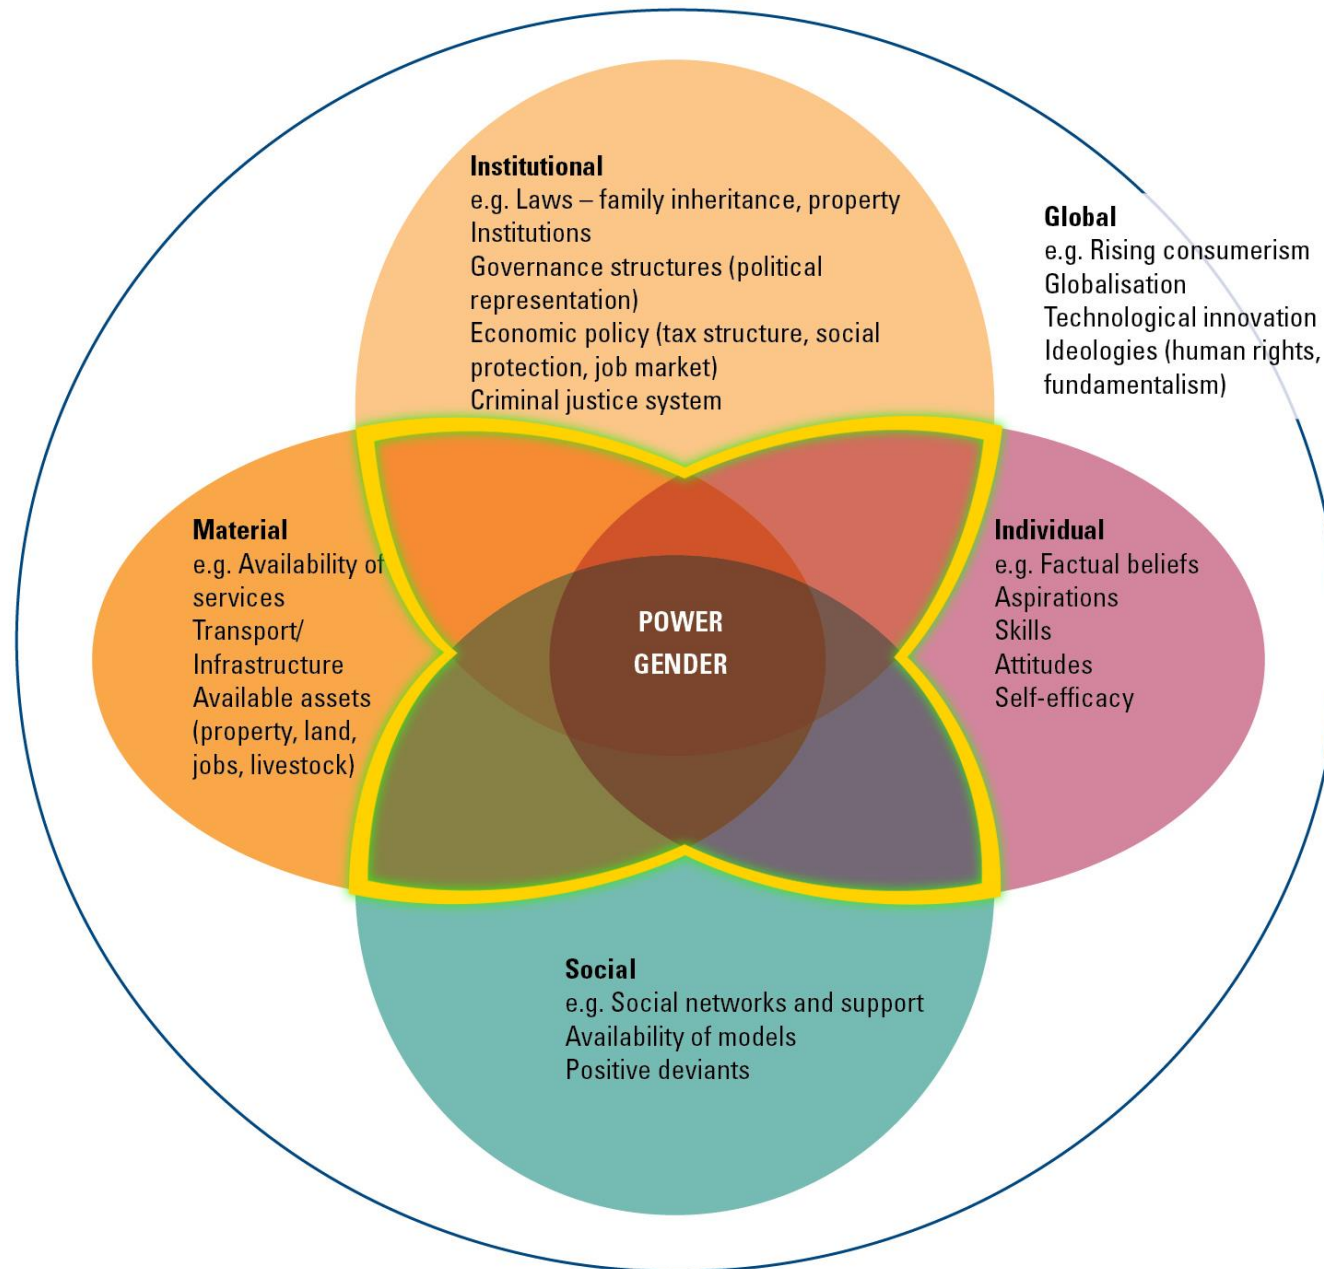

3

Strong norms take more time to achieve. We will need a critical mass to create change.

Drivers of Change

The Flower Diagram is an adapted version of the ecological model - the 'Flower Diagram' developed by Cislaghi & Heise (2018).

Norm change strategies

Four Norm Change Strategies

1

Law & Policies

2

Mass Media

3

**Personalized
Normative
Feedback**

4

**Group
Discussions**

1 Laws & Policies

This can involve legislating change, such as creating a law that dictates minimum marriage age.

It can also involve changing how existing laws are viewed or upheld.

Example 2: traffic behavior

- **Corrupt traffic police fired and replaced:** **signal** of strong institutional commitment.
- **Mimes:** initially 40, then 400!
- Dramatic success in terms of **visibilization**, but replication *questionable*.
- **Further strengthened normative expectations**, promoted public deliberation—it wasn't *just a show*.

Traffic-related deaths in Bogotá and Colombia 1991 - 2012 (rate per 100 000 inhabitants)

Group Discussion

(10 minutes)

Laws & Policies

What are your experiences and thoughts on this change strategy?

When you think of your own work, how visible is this strategy?

How useful do you think this strategy is in your work?

2 Mass Media

Media approaches share information about harmful effects of a practice, but often focus more on the fact that the population is abandoning the practice.

Goal: to change social norms (people's perceptions about what others around them do and approve of)

Techniques: radio broadcasts, billboards, theatre plays, and role model approaches.

Group Discussion

Mass Media

What are your experiences and thoughts on this change strategy?
When you think of your own work, how visible is this strategy?
How useful do you think this strategy is in your work?

3

Normative Feedback

Normative feedback refers to providing personalized information about how one performs compared to their peers.

Reduction from 0.6 to 6.3 % in household energy consumption (2% average)

Normative Feedback

What are your experiences and thoughts on this change strategy?
When you think of your own work, how visible is this strategy?
How useful do you think this strategy is in your work?

4

Group Discussions

Community conversations that allow for critical reflection about common experiences and issues

Particularly effective if based on a people-led approach

1/ Change of attitudes and norms within core group

- **Problematization** of current situation
- **Knowledge** to help problematization
- **Values Deliberation** to identify common values and change practices
- **New outcomes now within reach:** individual and collective aspirations
- **Beliefs** that people can individually and collectively achieve outcome: self-efficacy

1/ Change of attitudes and norms within core group (enough?)

2/ Group reaches out to others, others witness change from the group

- People see themselves different
- Others see them different
- Seeing is believing
- New knowledge and understanding are shared
- Group expands to many

© Tostan

3/ Majority publicly agrees on new norm: nobody can say “I didn’t know”

Group Discussion

(10 minutes)

Group Discussions

What are your experiences and thoughts on this change strategy?

When you think of your own work, how visible is this strategy?

How useful do you think this strategy is in your work?

Feedback from all Group Discussion

(10 minutes)

What are your experiences and thoughts on the four change strategies?
When you think of your own work, how visible are these strategies?
How useful do you think these strategies are in your work?

Further points on
change strategies

**Personalized normative
feedback about compliance
with laws & policies**

Strategies can be mixed!

**Group discussions
about media campaigns**

Choosing your Primary Strategy

If norms are a misrepresentation of reality:

Use normative feedback!

Choosing your Primary Strategy

If there is only one active norm:

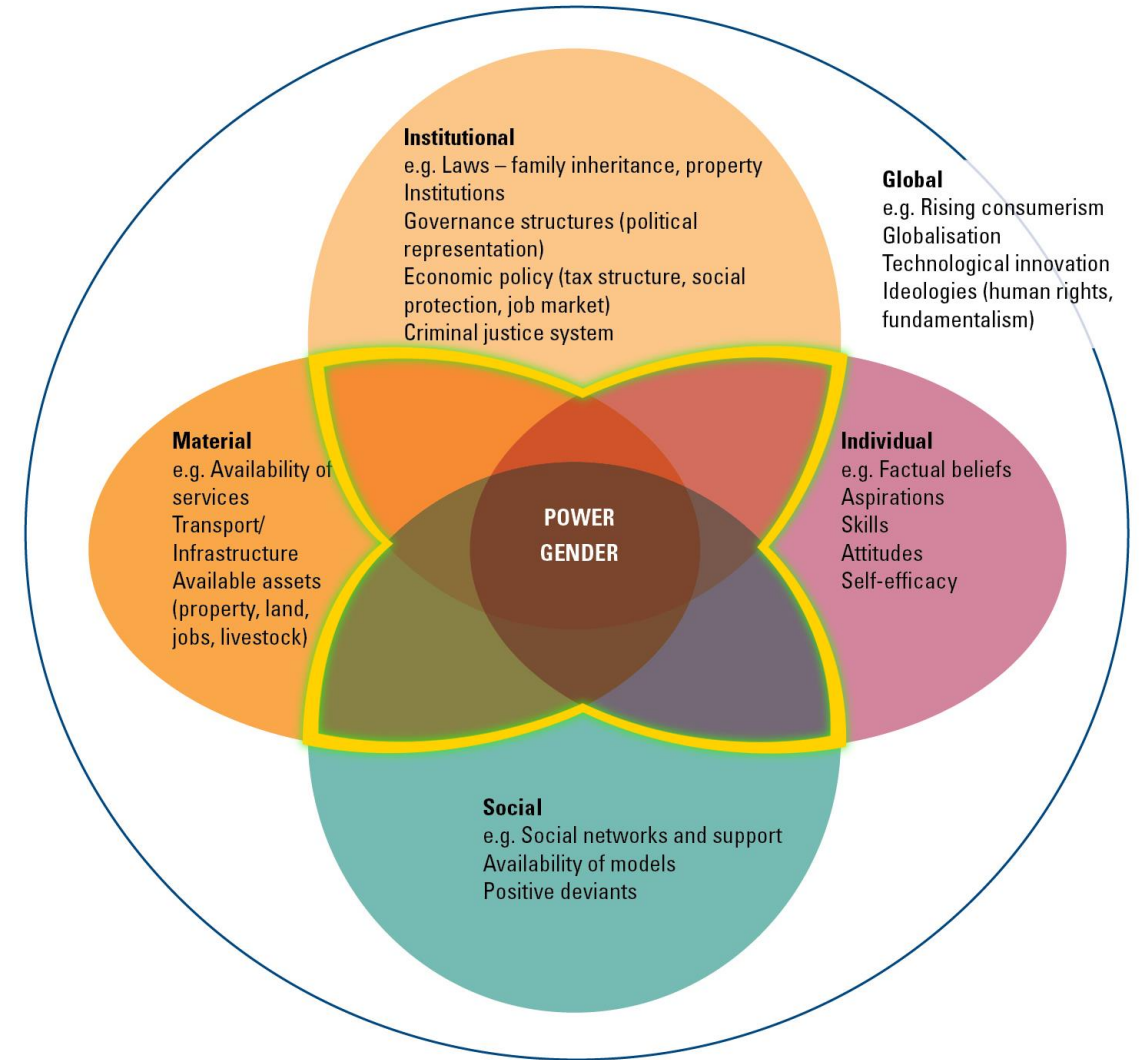

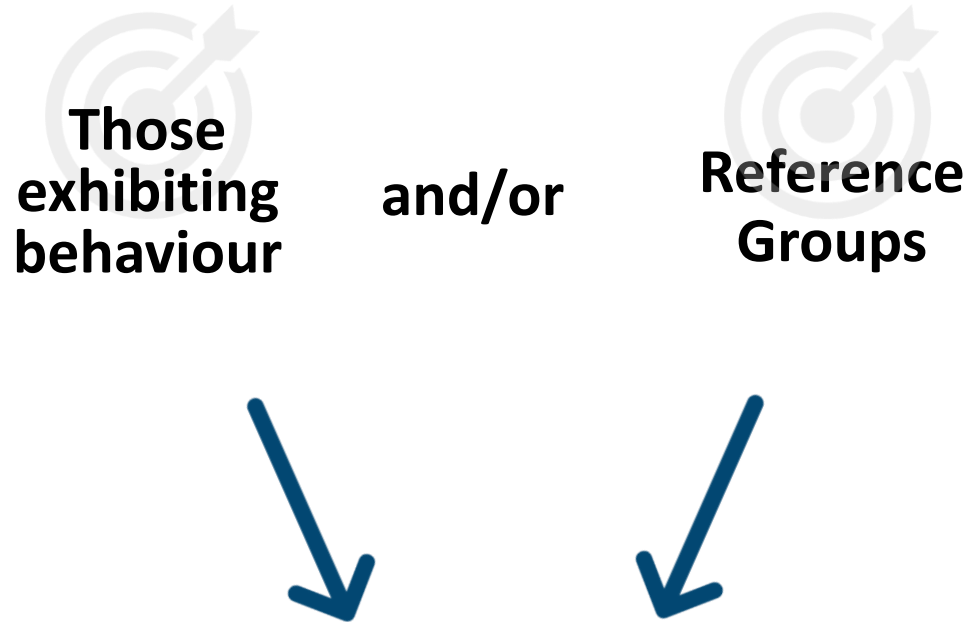

Use normative feedback!

Or if there are multiple norms:

Use group discussions or mass media!

Who to Target?

Key Takeaways

1

Change happens when people see enough other people changing. It takes longer to achieve with social norms.

2

There are 4 norms strategies:
Laws & policies
Mass media
Normative feedback
Group discussion

3

Strategies can be mixed!
Choose your primary strategy and who to target in selecting one or multiple change strategies

3 Questions & Clarifications

(5 minutes)

Reflection Task

In preparation for the next webinar:

Select a health intervention that you have seen or created in the past.

Consider: Which of the four strategies are most appropriate to be integrated and how.

- 4 Strategies:**
- Laws & Policies
 - Mass Media
 - Personalized Normative Feedback
 - Group Discussions
